M3-X™ EXTREMITY FIXATION SYSTEM

The M3-X™ EXTREMITY FIXATION SYSTEM is a rigid fixation system for small bone orthopedic osteotomies and fractures.

M3-X™ offers modular instrumentation and a superior screw and plating system in one compact tray.

M3-X™ features four sizes of true lag screws used for the fixation of the hand and foot. OsteoMed's lag screw design eliminates the need to over drill the proximal segment while the low profile head minimizes countersinking.

M3-X™ features 1.2mm, 2.0mm, 2.4mm, and 3.0mm titanium lag screws, 1.2mm, 2.0mm, and 2.4mm fully threaded titanium screws and 1.2mm, 2.0mm, and 2.4mm titanium plates.

M3-X™ system is ideal for hand fracture fixation and many other extremity fixation procedures.

The M3-X™ EXTREMITY FIXATION SYSTEM features malleable titanium plates to be used in combination with our fully threaded and lag screws to increase clinical adaptability.

The Visidisk™ simplifying screw handling and preventing loss of inventory.
