

Vivex DBM 100™ is a demineralized bone matrix putty derived from 100% allograft bone processed using a proprietary demineralization process.

DBM 100™ has been histologically demonstrated to exhibit the essential elements of bone formation. It does not contain any extrinsic carriers and is entirely derived from 100% allograft bone. The product is provided in a ready to use syringe.

DBM 100™ is indicated for use as a bone void filler for the treatment of surgically created or traumatic skeletal defects that are not intrinsic to the stability of the bony structure.

DBM 100™ may be used in surgical procedures including:

- Spine
- Orthopedics
- Reconstruction
- Dental
- Neuro
- Trauma
- Foot & Ankle

FEATURES AND BENEFITS

- Osteoinductive - each lot is assayed
- Osteoconductive
- Resists irrigation
- 100% bone - no additional carrier
- Sterility assurance level 10^{-6}
- Bio-compatible
