

# Workflow that works for you

Philips ST80i Stress Testing System

**PHILIPS**

# The next generation

Fueled by the workflow needs of clinicians, the Philips ST80i Stress Testing System opens up new avenues for productivity and decision-making. ST80i features a wireless patient experience, bi-directional connectivity and advanced decision support tools that enhance data review, patient care and workflow efficiency. Designed with clinicians and patients in mind, ST80i brings cutting-edge technology and clinical-support tools into customizable and easy-to-use software. The result is a flexible and intuitive solution designed to present stress-testing data useful in streamlining clinical decision making and productivity.

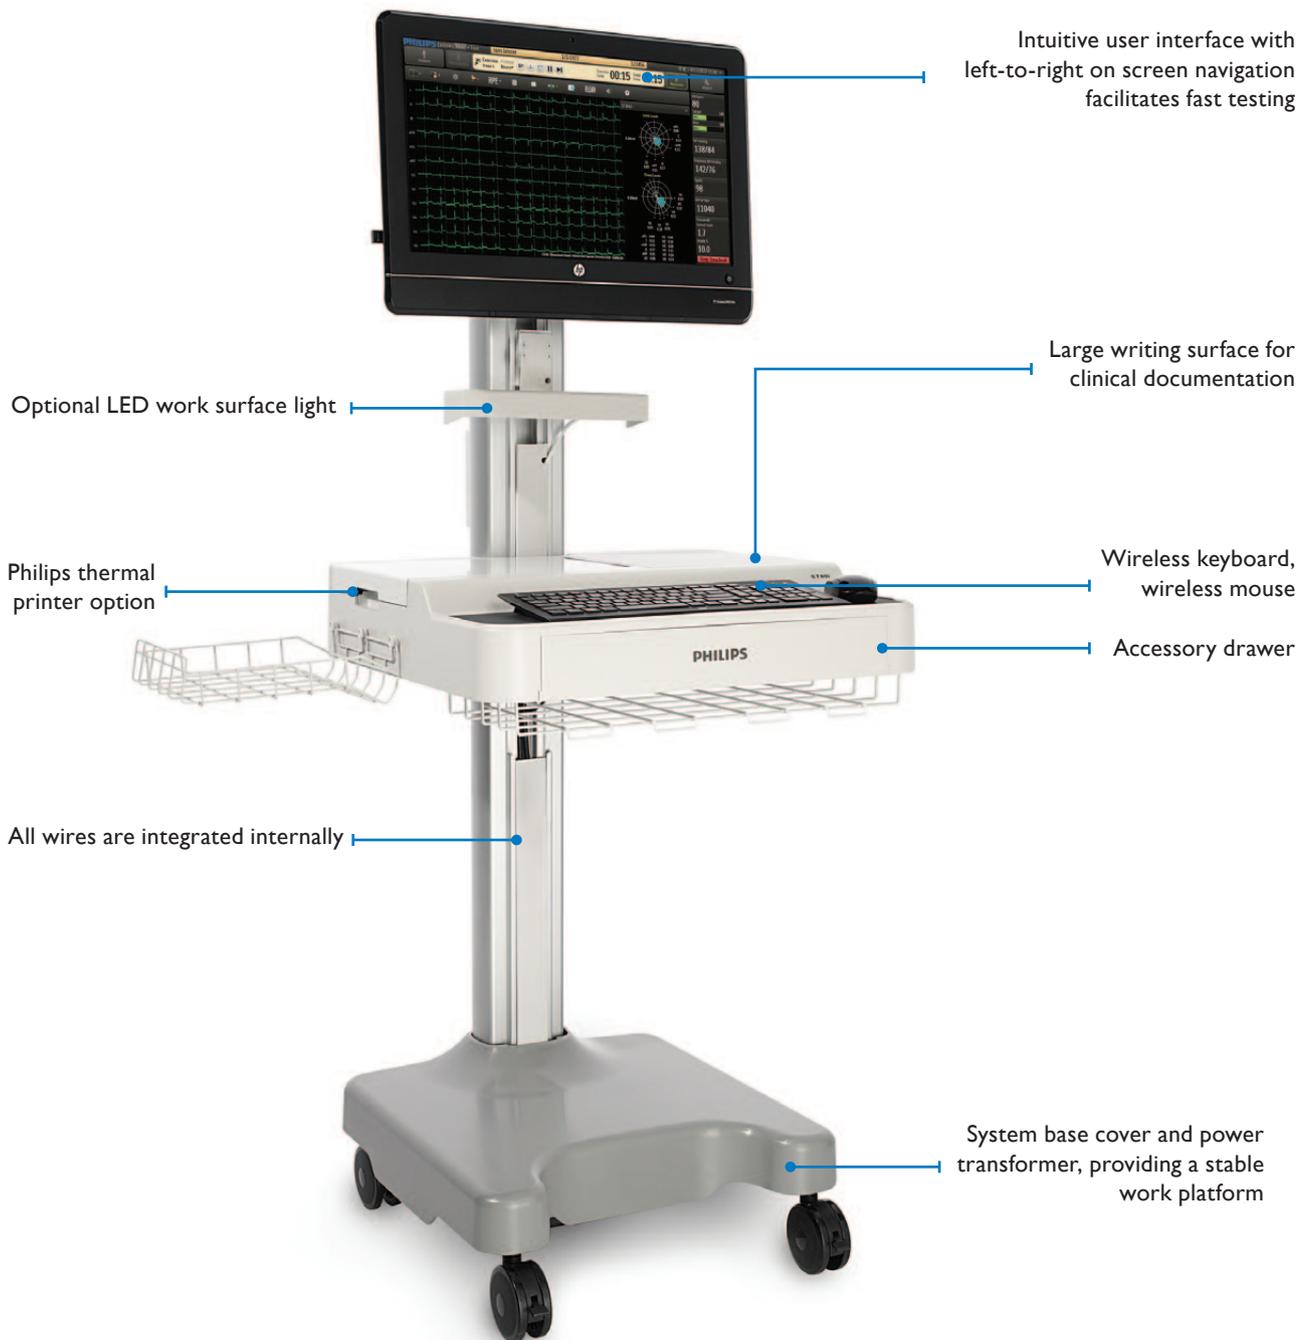

## Key advantages

- Facilitates clinical workflow by wirelessly performing stress procedures in an intuitive, customizable format.
- Provides advanced clinical decision support tools to assist with clinical evaluation.
- HIS connectivity to quickly acquire patient demographics and orders to speed workflow.
- Interfaces with Intellibridge ECG Management System to enhance workflow of ECG, Stress and Holter.
- Ability to include electronic signature.
- Export final reports to the hospital electronic medical record (EMR) upon completion of report.

Software features ST views including ST map and zoomed ST

# of stress-testing

# Smart, streamlined solutions

## An untethered patient experience

**Freeing your patient from wires and decreasing the likelihood of motion interference, Philips ST80i has a compact wireless patient module that enhances traditional stress-testing systems.**

- Wireless, compact patient module reduces the hazard of tripping and enhances patient comfort and movement while still transmitting a clear, high-quality signal
- Reduces motion interference with the elimination of unwieldy cables
- Facilitates patient transition from exercise to bed for stress-echo procedure

Cordless compact patient module

# Advanced analytical methods

Philips ST80i features tools to help clinicians analyze stress ECG information.

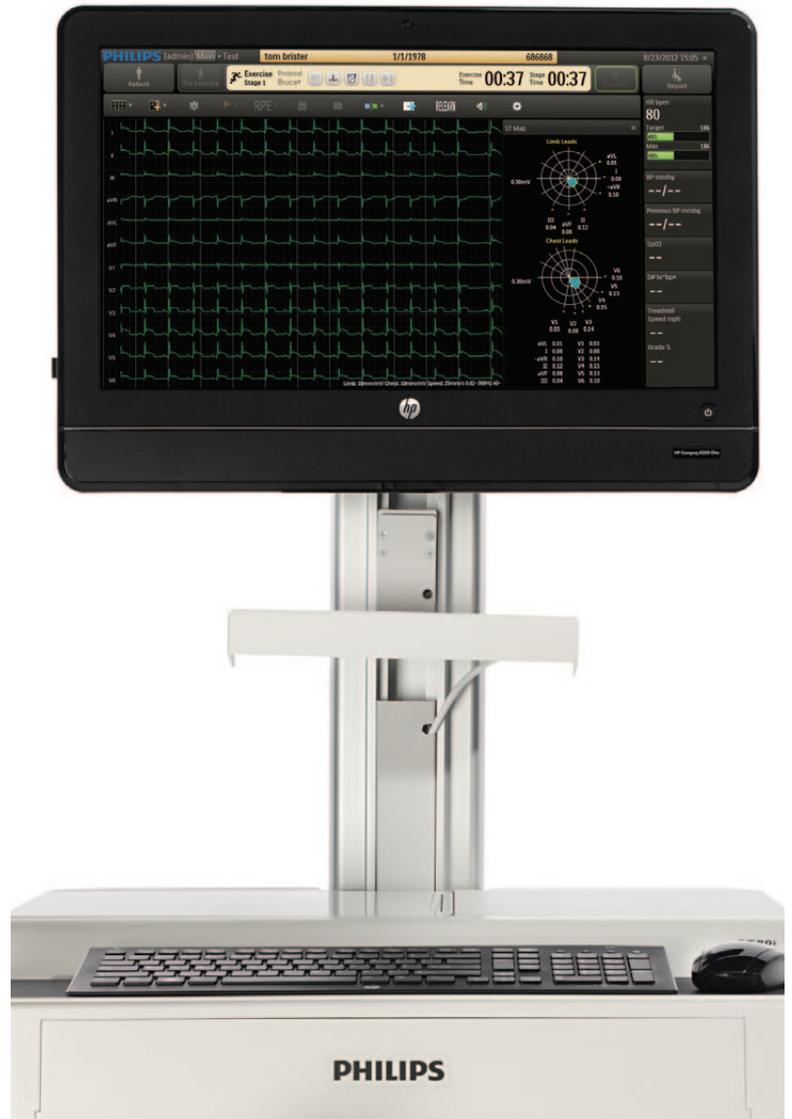

## Diagnose with confidence using algorithms designed in Philips Advanced Algorithm Research Center.

- Philips DXL Algorithm<sup>®</sup> uses sophisticated analytical methods for interpreting the resting ECG and ST Maps, the same algorithm used in Philips ECG equipment.
- Philips CAI algorithm is designed specifically for stress testing.

\* DXL ECG Algorithm can provide ECG analysis for a standard resting ECG using standard chest and limb leads. Other configurations are not supported.

## View comprehensive ST segment and morphology analysis in an anatomically intelligent format.

- View ST Maps, patented visual anatomical representation of ST deviations in frontal and horizontal planes.
- Quickly identify anomalies with the dynamic Zoomed ST display.
- Monitor ST changes with auto-comparison of current and reference beat.
- Watch for ST level and slope changes using the 12-lead average complexes.
- Clearly see arrhythmias with Dominant Rhythm Change notifications.
- Access comprehensive and customizable reports with prognostic indicators (Risk Scores).

Philips ST80i offers wireless testing with an intuitive interface and customizable all-in-one computer to help streamline workflow.

# Connectivity that works for you

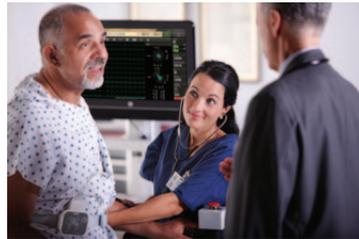

Managing patient information from start to finish, Philips ST80i turns stress ECG data into actionable insights, utilizing bi-directional network connectivity to collect and distribute data wherever it's needed.

## Import Options

- Upload patient data from your HIS or manually enter patient data

## Export Options

- Easily exports final patient reports in a PDF format
- Interfaces with Philips IntelliSpace ECG and IntelliBridge Enterprise
