Electronic
Tourniquet

The AT4 Electronic Tourniquet:
A state-of-the-art dual channel electronic
touniquet with integral power supply which requires
no external compressed air supply comes with
mobile stand and cuff supply hoses

Innovative technology – practically applied

The AT4 Tourniquet System is a completely new design which is intuitive and simple to use. Its compact construction is light weight yet robust, containing advanced technology which offers maximum safety and reliability.

The electronic version operates from its own integral air supply, removing the need for an external pressure source, and both this and the pneumatic version have sensitive leak compensation facilities as well as automatic self-diagnostic checks on start-up, which means they are calibrated every time they are switched on.

An innovative added safety feature has been incorporated for Bier's block regional anaesthesia procedures (IVRA): it will simply not be possible to deflate cuffs in the wrong order risking the dangerous release of anesthetic into the rest of the patient's body.

 AS STANDARD Automatic self diagnostic checks
On start-up and throughout use

 AS STANDARD Independent displays
Pre-select and actual cuff
pressure readings

 AS STANDARD Precision controlled regulators
User friendly simple to use controls

 AS STANDARD IVRA (Bier's block)
Procedural guidance feature

 AS STANDARD Automatic LCD timers
With user defined elapsed time alarm

 AS STANDARD Additional storage facility

 AS STANDARD Cuff hooks
For ease of storage
