

Hy21® Emesis Support

An effective solution to biological waste management and containment

Part of Hygie's containment Technology

A solution to Healthcare-Acquired Infections (HAIs)

- Our hy21® technology helps to effectively manage and contain bodily wastes at point of care; it also insures that health care providers adopt the best method to reduce the number of steps required in handling emesis, thereby reducing the spread of pathogens which may lead to contamination and HAIs.
- Used with Hygie Hygienic Covers® Emesis Bag , hy21® Emesis Support creates the perfect solution to contain potentially harmful pathogens and further promotes safe, reliable practices in health care. It's unique super-absorbent pad included in each bag is designed to turn liquid wastes into a gel within seconds.
